

# This is Crompton Controls Introducing...

## The **New** Smooth-BRAKE for Band Resaw type machines

### The name says it all!

*Unique* 3 stage voltage ramp down to zero speed  
Controlled braking eliminates shock loads, vibration & noise  
Simple set up with automatic cut off at standstill

### Compared to previous models the **New** Smooth-BRAKE control panel is...

**Approx 40%**  
smaller in  
size

**Over 25%**  
reduced in  
price

**Up to 10%**  
more energy  
efficient

### The Smoothest route to **POWER** compliance with

**Free** comprehensive advice and selection assistance  
Generous promotional discounts and special offers  
Credit card easy payment facility

## Our Other Market Leading DC Injection Brakes

### **S10** Brakes for single and multi motor machines

Lowest Cost, Easy to Retrofit & Simple to Set Up!

### **S35** Brakes Heavy Duty Rated for High Inertias

Maximum DC Injection for strong braking force!

## Start, protect & safely stop your woodworking machines today

See us at the W8 exhibition, Stand U08  
NEC Birmingham 26-29 October '08

# Did you know.....

***Two UK deadlines have already passed for the safe braking of woodworking machines, with a final mandatory deadline in 2008!***

It is an essential requirement for woodworking machinery to stop within a controlled time period if there is a risk of contact in the run down mode, (as specified by PUWER 98 regulation 15).

The Approved Code of Practice (ACOP) paragraphs 130-135 specify the timetable by which safe stopping devices must be fitted to existing woodworking equipment.

## **No later than 5th December 2003!**

Circular Saw Benches, Powered & Hand Fed Cross Cut Saws, Single & Double End Tenoning Machines & Combination Machines with circular and/or tenoning attachment.

## **No later than 5th December 2005!**

Narrow Band Saws, Resaws, Vertical Spindle Moulders (unless fitted with a manual or foot brake), Hand Fed Routing Machines, Planing/Thicknessing Machines & Surface Planing Machines.

## **No later than 5th December 2008...**

Any other machine for which the Risk Assessment shows braking to be necessary!
